

Visit my portfolio app prototype here:

↗ www.piotrsiudeja.com

This prototype was created using Figma. p.siudeja_portfolio web app v.β is a browser-based application designed for viewing documents. It is a convenient tool for presenting work and design experience. The application addresses the challenge of showcasing complex projects. The cv-pdf_watcher section helps organize different language versions of the document.

This virtual binder contains sections for the curriculum vitae and portfolio. The CV is available in three language versions, with quick content scrolling (↖ ↘ buttons) and the option to download a .pdf file via the Canva platform.
